

How to Kill Covid: GJK Facility Services Offers Latest Technology With the Apollo Air Space

Gjk Facility Services Wednesday, April 20th, 2022

Covid Killing Technology, GJK Facility Services Offers Latest Technology With the Apollo Air Space Leading provider of commercial cleaning and facility services,

Leading provider of commercial cleaning and facility services, GJK Facility Services, announces the introduction of The Apollo Air Space, a unique device that kills up 99.99% of harmful airborne pathogens including coronavirus

The team at GJK Facility Services, led by the passionate and forward-thinking entrepreneur, George Stamas, has again achieved a landmark feat with the introduction of [The Apollo Air Space](#). The tech-driven cleaning solution is proven to achieve a 99.99% reduction against SARS-CoV-2, SARS-CoV, MERS, Influenza, Norovirus, Hepatitis A, and other harmful contaminants, making it particularly ideal for facilities looking for how to kill Covid.

The Covid-19 pandemic undoubtedly exposed the vulnerability of the healthcare system as well as cleaning and decontamination solutions. In a related development, a plethora of solutions has been developed by several brands across the globe to help families and businesses stay safe and healthy. However, many of such solutions do not effectively address the concerns of customers in terms of user-friendliness, comprehensiveness, and effectiveness, which is where [GJK Facility Services](#) is looking to make a difference by introducing The Apollo Air Space.

Tested by renowned UK-based Campden BRI aerobiology laboratory, The Apollo Air Space offers a superior air sanitisation system suitable for the needs of hospitals, schools, train stations, airports, and similar spaces. It consists of a tube that has a unique quartz sleeve to create Hydroxyl Ions through a reaction between a single frequency UV light and a unique metal oxide coating applied to the inner walls of the device. The device is unique as it leverages a revolutionary photocatalytic oxidation process and Hydroxyl Ions that destroy harmful airborne pathogens as opposed to capturing them.

The non-contact, non-chemical air purification system offers a clean air delivery rate of 160 cubic meters per hour, effectively treating different levels of contamination and sized environments.

For further information about The Apollo Air Space and other solutions from GJK Facility Services, visit - <https://gjkfacilityservices.com.au>. GJK Facility Services can also be found across social media, including [Facebook](#) and [LinkedIn](#).

About GJK Facility Services

GJK Facility Services was founded by George Stamas, an award-winning entrepreneur and cleaning service professional, to help clients stay safe and healthy. The commercial cleaning company has grown over the years to become a multi-disciplinary facility services business providing cleaning, restoration, grounds, projects and maintenance and facility services to a diverse range of markets.
