

IS YOUR BUSINESS SECURE? Veev can help improve your cyber security.

Veev Group Thursday, May 5th, 2022

Cyber security has never been more critical to your organisation and to ensure continuity of service. If you have been thinking about improving your cyber security or need advice on ways to provide better protection for your business, Veev can help.

Veev consultants combine specialist skills in operations, strategy, and technology to make a real difference to the operational performance of our clients. We have significant experience working with industry leaders to improve their understanding and capability to prevent and respond to cyber threats.

We don't claim to offer a one size fits all approach - each review considers the position and size of your organisation, and will provide an outline and detailed findings with a roadmap for improvements. The outcome will allow you to collaborate in areas of cybersecurity and act to raise individual capabilities where required.

The practical knowledge and experience from our team of experts will ensure that any improvements your business may need to ensure better security will be documented and outlined for you. Veev specialise in organisational compliance to the ISO/IEC27001 security standard and alignment with the Australian Cyber Security Centre's Essential Eight which sets out eight key Cyber Security Mitigation Strategies and an associated maturity model.

The International Standard specifies the requirements for establishing, implementing, maintaining, and continually improving an information security management system (a system of policies, processes and tools) within the context of your organisation.

MEDIA RELEASE – 4 May 2022

IS YOUR BUSINESS SECURE? Veev can help improve your cyber security.

Cyber security has never been more important and it helps to rely on experience: if you have been thinking about improving your cyber security or need advice on ways to provide better protection for your business, Veev can help.

Veev consultants combine specialist skills in operations, strategy, and technology to make a real difference to the operational performance of our clients. As Common Use Agreement (CUA) and WALGA members, we have significant experience working with Local Governments as well as leaders in other industries to improve their understanding and capability to prevent and respond to cyber threats.

We don't claim to offer a one size fits all approach - each review considers the position and size of your organisation, and will provide an outline and detailed findings with a roadmap for improvements. The outcome will allow you to collaborate in areas of cybersecurity and act to raise individual capabilities where required.

The practical knowledge and experience from our team of experts will ensure that any improvements your business may need to ensure better security will be documented and outlined for you. Veev specialise in organisational compliance to the ISO/IEC27001 security standard and alignment with the Australian Cyber Security Centre's Essential Eight. The Essential Eight sets out eight key Cyber Security Mitigation Strategies and an associated maturity model.

The International Standard specifies the requirements for establishing, implementing, maintaining, and continually improving an information security management system (a system of policies, processes and tools) within the context of your organisation.

To register your interest, or request additional information, please contact Steve North, Managing Director of Veev Group, at steve.north@veevgroup.com.au or on 0406 381 978.

ENDS.
